

## Ten key security measures that ensure a safe car park

- 1) The multi-photoelectric checking system and car-blocking equipment can check the size and position of parking vehicles efficiently.
- 2) If anyone enters the parking area while the system is moving, an alarm sounds and the system stops.
- 3) Anti-dropping system.
- 4) The checking system can prevent the steel wire rope and roller chains from coming loose or breaking.
- 5) The limit system can protect the equipment running out of limits.
- 6) The out-time limit system will work when the system of position-switch and limit-switch are out of control.
- 7) Should there be any electrical problem the system will protect itself.
- 8) Automatic door which have the function of clamping protection.
- 9) Should there be any mal-function, the system will stop automatically and display the problem mail-function code at the same time.
- 10) The emergency switch can be used to cut power off when there is emergency

The short-circuit, phase lacking and over-loading protecting system
